

CA Proxy

CA Proxy

- Move client_ticket attribute to /var/lib/icinga2/pki Tomorrow
- Refuse to sign certificate if it already has the correct chain and doesn't expire "soon" Tomorrow
- Add SAN for self-signed certificates
- Finish implementing TTL support for ApiCallbackInfo structs
- Implement support for reinitializing the ApiListener's SSL_CTX while Icinga is running Tomorrow
- ~~node wizard should save ca.crt for delayed CSR requests~~
- ~~node wizard: Make ticket optional~~
- Use case: No connection to the master + ticket: Where do we get our CA from?
- ~~Ensure that Icinga does not sign CSRs using its own (non-matching) CA (for satellites/agents)~~
- Improve formatting and output for new CLI commands
- Implement audit logging for CA requests Tomorrow
- Improve error handling for the new CLI commands
- ~~Change default path for certificates to /var/lib/icinga2/pki~~
- Try to minimize disk I/O
- Use CA certificate for trusted-master.crt
- Cleanup timer for *.json files
- ~~CLI command to approve requests~~ ~~23 Aug~~
- API request to approve requests
- ~~node wizard: Eliminate question for CSR host when the user specified that Icinga should initiate connections~~
- ~~node wizard: New question for "passive" CSR autosigning~~
- JSON result mode for "node setup" (--json)
- New CLI command: "node status" + --json
- Routing for CSR messages
- Test upgrade path (/etc/icinga2/pki vs. /var/lib/icinga2/pki); CLI command
