

# Diagnostics on MJO and jet stream for TVD scheme test

- Case: 20180101& 2018115
  - UFSP6:GFSv16 physics, ICs: CFSR atm, CPC ocn and ice, CFS forcing wave. ran by Jiande)
  - UFSP7:NOAH MP+ updated physics, ICs: GEFSR atm, CPC ocn and ice, GEFSR forcing wave
  - UFSP7\_TVD: NOAH MP+ updated physics+TVD, ICs: GEFSR atm, CPC ocn and ice, GEFSR forcing wave
  - All models are on C384L127 resolution
- Reference: CFSR

# **20180101 case**

# MJO

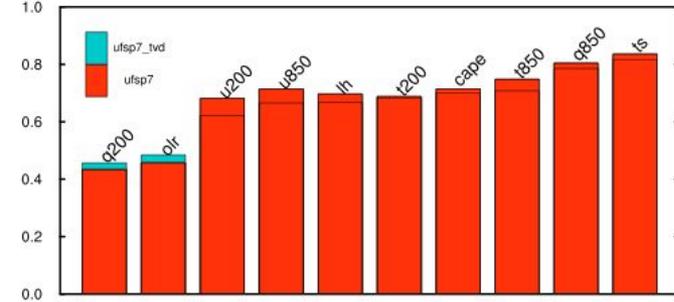

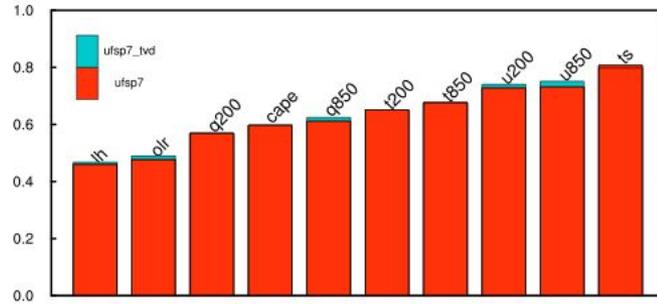

- P7 and P7\_TVD perform similar
- Both P7 versions show weaker MJO after ~10 days but stronger MJO ~19-24 days than P6.

# U200 (mid-high lat)

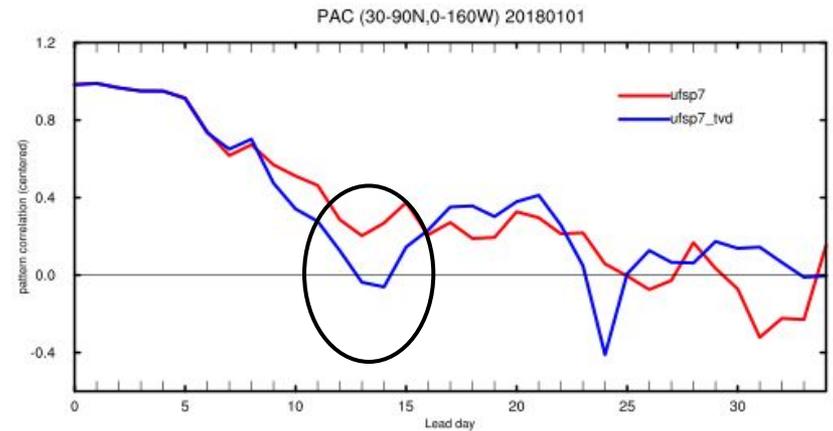

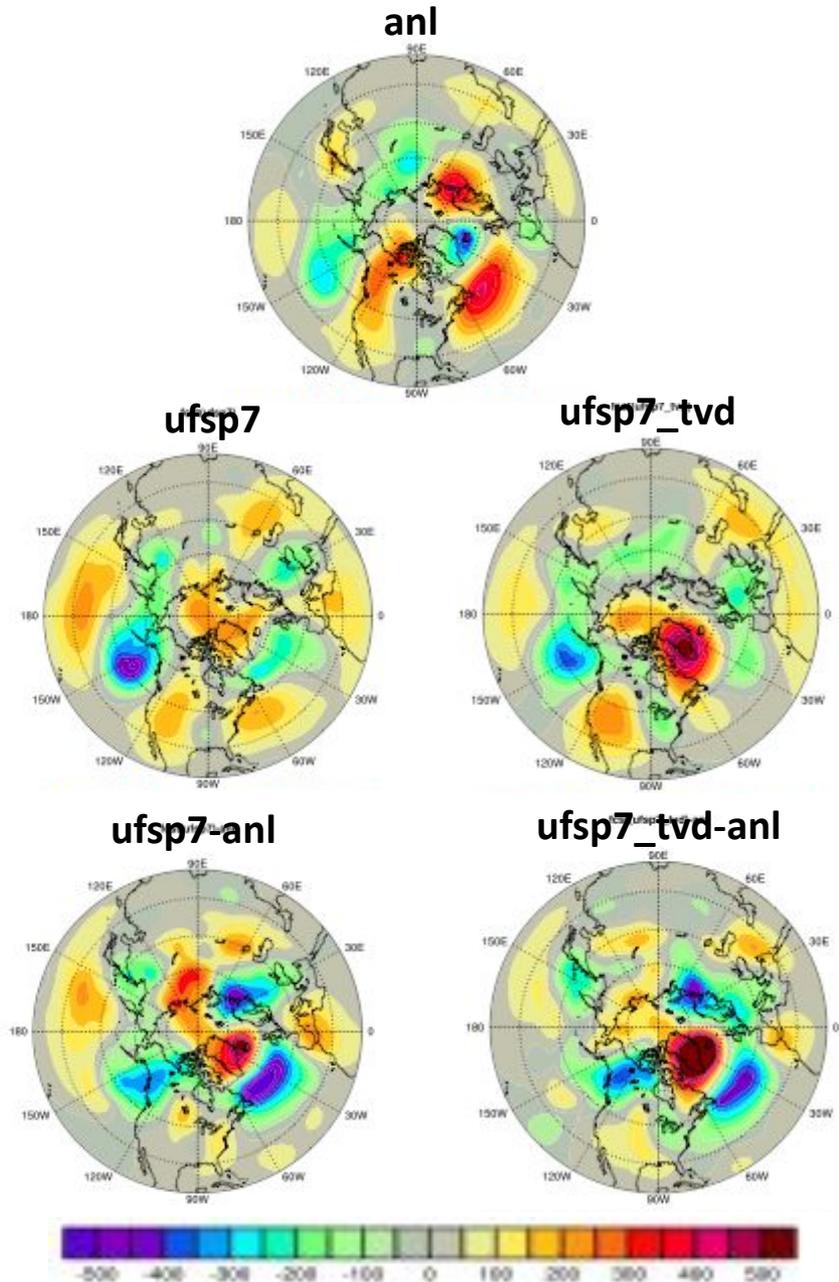

# T400

T 400hPa 20180101 lead=13

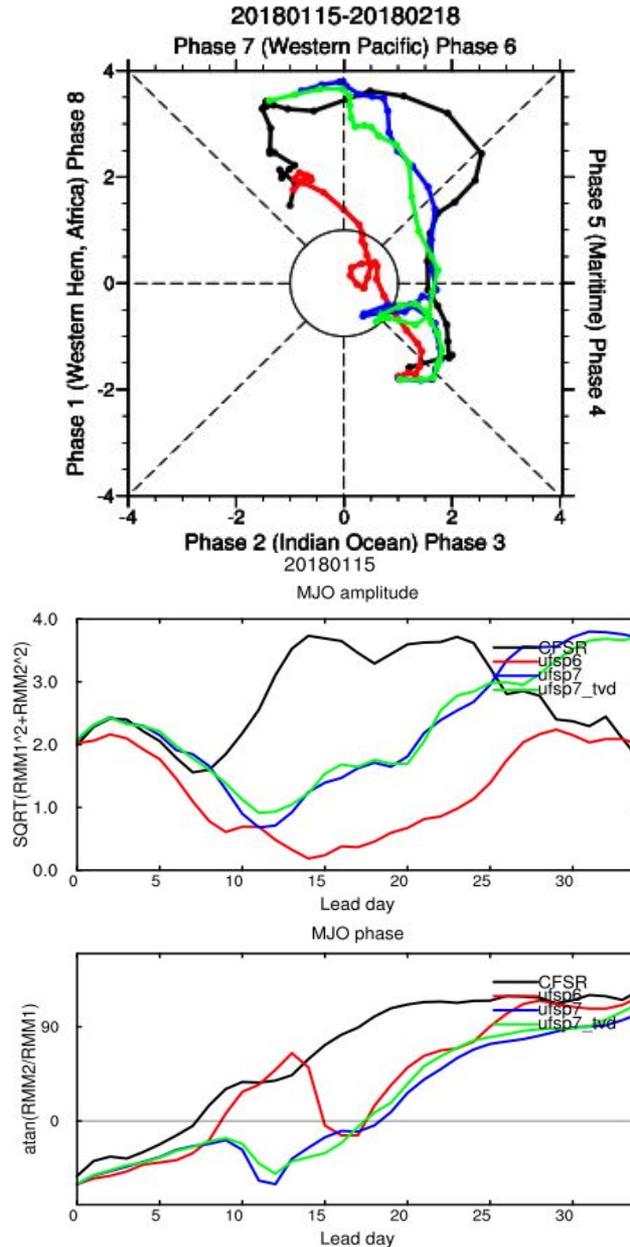

# H500 Anomaly (lead=13)

- Smoothed daily climatology calculated from NCEP reanalysis 1979-2000 (using 4 harmonics)
- Consistent with the U200 PC drop over east Pacific-Atlantic ocean at lead day 13-14 for ufsp7\_tvd

**20180115 case**

# MJO

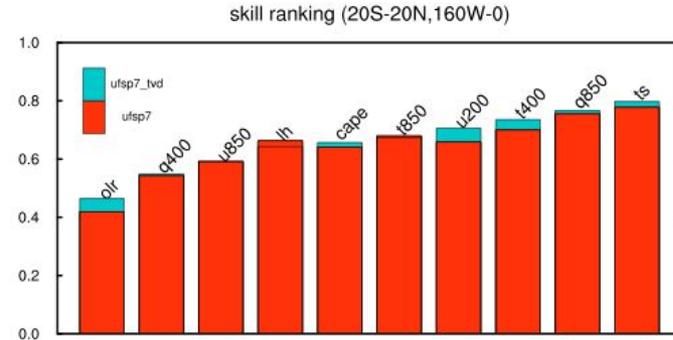

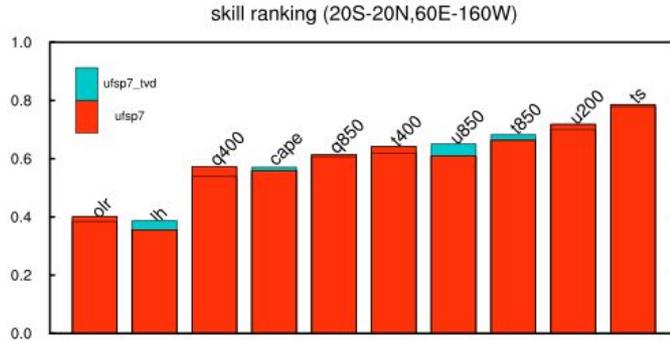

- P7 and P7\_TVD perform similar
- P7 and P6 has weaker MJO bias but P7s are better than P6.
