

Google Summer of Code

An Open Source Projekt During the Summer Break

Google Summer of Code is a global program focused on introducing students to open source software development.

Working online, successful student participants receive a stipend from Google, enabling them to focus on their programming projects typically between 3 to 12 weeks.

Mixxx is a feature rich DJ mixing application. It supports many MIDI and HID DJ controllers, runs on Win Linux and macOs. It supports effects, harmonic mixing and beatmatching.

In the Mixxx project, students can apply for a slot with their own project. There is a list of project ideas that can be used for inspiration.
