Lists on all screens will be like devexpress's light/dark theme. These colors used in the drawing are not valid. If light is selected in the theme, the grid will also be in the color of the light theme. If the theme is dark, the grid will be in the dark theme color. It will also be suitable for light/dark theme in forms. Icons are representative.

The layout of the textboxes has been determined as 2 columns. It can be split into 3 or more columns at the time of design. How will the visuality be at its best?
